

Safety Precautions

Because this fixture features an opaque shielded top for direct-only lighting, it contains a single downward-facing LED light engine. Therefore, you will only need to connect **one set of wires** to the main power supply.

Dimensional Data

- Cylinder Diameter: 4.5"
- Cylinder Height: 11"
- Overall Height (Including Backplate): 14.75"

INSTALLATION STEPS

Step 1: Ground Connection

Securely attach the fixture's ground wire under the designated grounding screw located on the mounting backplate.

Step 2: Hot Connection

Connect the single colored (hot) wire from the fixture to the corresponding hot wire originating from the wall's outlet box.

Step 3: Neutral Connection

Connect the single white (neutral) wire from the fixture to the corresponding white neutral wire originating from the outlet box.

Ensure all connections are secured with appropriate wire nuts and carefully tucked into the outlet box before mounting the diecast aluminum backplate flush against the wall.
