

11224 - LUME I INSTALLATION INSTRUCTIONS

- Make sure power is completely off at the fuse box.
- Have your fixture installed by a qualified licensed electrician
- Prepare everything in a clear area.
- Wear gloves at all times during this installation.
- Read instructions carefully before you start assembly.
- Keep this instruction sheet for future reference.

Please Note:

- This fixture comes with pre-wired LED module(s).
- Unless instructed to do so, please do not touch any part of the LED module(s) as an unnecessary contact with the module could cause permanent damage.
- For dimming, an ELV (Electronic Low Voltage) type of dimmer is required.

1. Remove the fixture from its original packaging. Remove the mounting plate (1c) from within the canopy backplate (2b) by unthreading four set screws (2a). Attach this backplate (2b) to the electrical junction box (1a), using screws (1d) provided in the hardware package.
2. Attach the canopy backplate to the mounting plate, which is attached to the electrical junction box on the wall. First attach all wiring (1b) with the provided marrets (white to white "N", black to black "L", ground to ground "G"). Now place the canopy (2b) onto the mounting plate (1c). As you move the backplate align the holes to the holes on the mounting plate (1c). Next, turning clockwise tighten all four set screws (2a) until the fixture is secure to the wall.

3. To prevent moisture from entering the outlet box and causing a short, seal around the top and side perimeter between the fixture and the wall surface with weather resistant caulking (illustration 1). The space at bottom should be left un-caulked to prevent moisture build-up. Apply a small amount of weather resistant caulking around the side perimeter between the cap nut and mounting plate.
4. You have now completed the installation of your fixture, enjoy.
